

Sticky and Fast:
Jumping and Landing of the Cuban Tree Frog (*Osteopilus septentrionalis*)

by

Rebecca B. Hicks

A Paper Presented to the
Faculty of Mount Holyoke College in
Partial Fulfillment of the Requirements for
the Degree of Bachelors of Arts with
Honor

Department of Neuroscience and Behavior

South Hadley, MA 01075

May 2012

This paper was prepared
under the direction of
Professor Dr. Gary B. Gillis
for eight credits.

This paper is dedicated to all of my family, friends, mentors and supporters over my four years at Mount Holyoke.

ACKNOWLEDGEMENTS

This work was supported and funded by the Mount Holyoke College Biology department and a National Science Foundation grant awarded to Dr. Gary B. Gills (NSF:IOS-1051603).

First and foremost, I would like to express my overwhelming gratitude to my advisor, Dr. Gary Gillis, whose patience, wealth of knowledge, and undying support made this honors thesis possible. Thank you for believing in me, guiding me, and giving me enumerable invaluable opportunities and experiences over the past two years. You have been an incredible mentor.

Secondly, I would like to extend a huge thank you to the post-doctoral fellow of the Gillis lab and my “unofficial” advisor, Dr. Laura Macesic. Your advice, encouragement, technical support, and friendship throughout my time in the lab and the course of this project were vital to its successful completion and to my sanity.

Thank you to my peers in the lab, Hilary Katz and Erica Levin for their assistance with my experiments and for being a great support system during this past year. I would like to convey additional thanks to Nell Maynard and Flynn Vickowski for their “frog wrangling” skills and camaraderie throughout my research.

To my parents, family, friends, and MHC Equestrian family, thank you for supporting me over the course of this challenging endeavor. Mom and Dad, thank you for providing me the opportunity to attend Mount Holyoke and for always being available to listen. Aalya, thank you for being there to commiserate with me, for your optimism and your encouragement every step of the way, *Mai tum se pyaar karti hun*. Julia, thank you for always reminding me that even when challenges arise, a little laughter gets you a long way.

Lastly, I would like to thank the frogs for allowing me to study them and opening my eyes to the beauty of movement in all forms.

TABLE OF CONTENTS

	Pages
List of Figures	vii
List of Tables.....	ix
Abstract.....	x
Introduction	1
Muscle Structure and Function.....	1
Anuran Locomotion.....	8
Cuban Tree Frogs.....	10
Experiments.....	12
Materials and Methods	14
Animals.....	14
Myology.....	14
Electrode Construction.....	15
Electromyography.....	17
Surgical Procedure.....	17
Jumping Trials and Data Collection.....	18
Data Analysis.....	19
Results	24
Kinematics.....	24
Binning Analysis.....	25
Amplitude Analysis.....	26
Onset Latency Analysis.....	26

Discussion.....	37
Anuran Evolution.....	37
Variation in Neuromuscular Control in Vertical Hopping.....	41
Conservation of Neuromuscular Control in Horizontal Hopping.....	42
Conclusion.....	43
